

Thread Chart

Threads Per Inch (TPI)	Thread Pitch
<p>When ordering or referencing inch fasteners, Threads Per Inch (TPI) is used instead of the thread pitch.</p> <p>The threads per inch come directly after the thread diameter and before the length (if applicable) when describing an inch fastener. For example, a hex cap screw with a 1/2" thread diameter, 13 threads per inch, and a 2" length could be listed like this:</p> <p>1/2"-13 x 2" Hex Cap Screw</p> <p><small>*This thread is not counted because its crest is outside the one inch measure.</small></p>	<p>Metric fastener threads are described by the pitch rather than the thread density. Thread Pitch is the distance from one thread to the next, measured from crest to crest.</p> <p>Like inch fastener descriptions, the thread parameter of metric fastener descriptions comes after the thread diameter. The example above has a 12mm thread diameter, a 1.75mm thread pitch, and a 55mm length. It is listed like this:</p> <p>M12-1.75 x 55mm Hex Cap Screw</p>

Unified Thread Standard

Coarse Thread (UNC)			
Size	TPI	Size	TPI
#1	64	1	8
#2	56	1 1/8	7
